b) Column **A** indicates the endocrine glands and column **B** - diseases caused by hormonal imbalances. **Write** in the provided space **A** the corresponding numbers from column **B**. *The numbers can be used only once.*

A	B
Pancreas _____	1. Addison disease
Pituitary _____	2. Diabetes
Thyroid _____	3. Basedow-Graves disease
Adrenal glands _____	4. Acromegaly

c) **Argue** the importance of proper nutrition in the prevention of diabetes.

\_\_\_\_\_

8. The pancreas is a mixed gland with double functions. The endocrine function of the pancreas is to secrete: glucagon, insulin etc. The exocrine function of the pancreas is to secrete: trypsin, pancreatic lipase, pancreatic amylase.

a) **Complete** the table with the name of the hormone secreted by the endocrine cells of the pancreas.

Pancreatic cells	Secreted hormone
<i>Alpha cells</i>	
<i>Beta cells</i>	

b) **Complete** the table with the names of the enzymes secreted by the pancreas.

Types of enzymes	Enzyme
Proteolytic enzymes	
Lipolytic enzymes	<i>Pancreatic lipase</i>
Glycolytic enzymes	

c) **Name** the segment of the small intestine into which the pancreatic juice is eliminated.

\_\_\_\_\_

d) **Name** two adnexal glands of the digestive tract which are located in the abdominal cavity. **Indicate** a function for each of these glands.
