- At the item 5 perform the proposed tasks for the studied programming language: **Pascal** or **C/C++**
- For the items 4, 6,7 check the programming language which you will use to perform the proposed problems:
  - Pascal**
  - C/C++**

Nr	Item	Score		
1	<p>The video camera of a smartphone can shoot color video clips. Each frame of the clip contains <b>192 KB</b> of information.</p> <p>a) Determine the amount of information (in <b>KB</b>) contained in <b>5</b> frames filmed with the given phone and write the result in the space reserved for the answer. Write the used formulas and the calculations: <b>Answer: _____ KB</b></p> <p>b) Determine the amount of information (in <b>MB</b>) which is contained in a video clip recorded with the given phone with the duration of <b>32</b> seconds and a frequency of <b>30</b> frames per second. Write the result in the space reserved for the answer. Write the used formulas and the calculations: <b>Answer: _____ MB</b></p>	L 0 1 2 3 4 5	L 0 1 2 3 4 5	
2	<p>a) Check in the list below the numbering system with the smallest base in which the spelling of the number <math>(381, 04)_x</math> is correct: <input type="checkbox"/> 2    <input type="checkbox"/> 8    <input type="checkbox"/> 10    <input type="checkbox"/> 16</p> <p>b) Convert the number <math>(5E4, C8)_{16}</math> from the hexadecimal numbering system to the binary numbering system and write the result in the space reserved for the answer: <b>Answer: ( _____ )<sub>2</sub></b></p> <p>c) Convert the number <math>(532, 14)_8</math> from the octal numbering system to the decimal numbering system and write the result in the space reserved for the answer: <b>Answer: ( _____ )<sub>10</sub></b></p> <p>Write the calculations:</p> <p>d) Check the truth value of the statement "The basis of a positional numbering system is defined by its number of digits.": <input type="checkbox"/> True    <input type="checkbox"/> False</p>	L 0 1 2 3 4 5 6	L 0 1 2 3 4 5 6	
3	<p>Let the logic circuit be given:</p>  <p>a) Write the logic function that is represented by this given logic circuit: <b>Y= _____</b></p> <p>b) Determine and write the value of the function <b>Y(1, 0, 0) = _____</b></p>	<p>c) Write in the reserved spaces the names of the elementary logic gates:</p>  <p>d) Check the type of the computer's <i>internal memory resource</i>: <input type="checkbox"/> software (programming resource) <input type="checkbox"/> hardware (technical resource)</p>	L 0 1 2 3 4 5 6	L 0 1 2 3 4 5 6

4	<p>Write a function <b>FN</b>, with two integer parameters <b>x</b> (<math>1 \leq x \leq 1000</math>) and <b>y</b> (<math>1 \leq y \leq 1000</math>). If the values of the parameters <b>x</b> and <b>y</b> are two consecutive integer numbers then the function will return the value <b>x + y</b>, otherwise the function will return the value 0.</p> <p>Example: The values 3 and 4 are consecutive. The values 5 and 4 are consecutive. The values 5 and 3 are not consecutive.</p>	L 0 1 2 3 4 5	L 0 1 2 3 4 5

	<p>The following C++ program is given:</p> <pre> //prog5 #include &lt;iostream&gt; #include &lt;string.h&gt; using namespace std;  int x[5]; char s[50]; int i, n;  int tab(int k) {     return n / k; }  void sir (int a[5], char s[50]) {     int j;      for (j = 1; j &lt;= 4; j++) {         cout&lt;&lt;s[x[j]-1];     }     cout&lt;&lt;"\n"; }  int main() {     strcpy(s, "INFORMATICA");     n = strlen(s);      for(i = 1; i &lt;= 4; i++) {         x[i] = tab(i);         cout&lt;&lt;x[i]&lt;&lt;" ";     }     cout&lt;&lt;"\n";     sir(x, s);     return 0; } </pre>	<p>Perform the following tasks for the program <b>prog5</b>:</p> <p>a) Write the name of the global variables of structured data type: _____</p> <p>b) Write the name of the function, which does not return any value by its name: _____.</p> <p>c) Underline in the text of the program <b>prog5</b> the operator which assigns a value to the component <b>i</b> of the array <b>x</b>.</p> <p>d) Write the name of the function, which uses the global variables for communication: _____.</p> <p>e) Write the name of the standard function used in the program <b>prog5</b>: _____.</p> <p>f) Write what will be displayed as a result of running the program <b>prog5</b>:  _____</p>	L 0 1 2 3 4 5 6 7	L 0 1 2 3 4 5 6 7					
6	<p>A string of the English alphabet chars is called a "pseudopalindrome" if the first character in the string is the same as the last. For example, "bob" , "anaconda". A file contains n strings, one per line.</p> <p><b>Task:</b> Write a program to calculate how many of the strings in the file are "pseudopalindromic". The program will contain a subprogram named <b>PP</b>, which will receive a string as a parameter and will return the value <b>1</b> if the string is "pseudopalindromic" and <b>0</b> - otherwise.</p> <p><b>Input:</b> The text file siruri.in contains in the first line an integer <b>N (1≤N≤20)</b> - the number of strings in the file. Each of next <b>N</b> lines contains a separate string, formed from lowercase English letters, with a length which will not exceed 100 chars.</p> <p><b>Output:</b> The text file siruri.out contains an integer – the number of "pseudopalindroms" from the input file.</p> <p><b>Example:</b></p> <table border="1" data-bbox="427 1736 1257 1930"> <tr> <td data-bbox="427 1736 790 1769">siruri.in</td> <td data-bbox="790 1736 941 1769">siruri.out</td> <td data-bbox="941 1736 1257 1930" rowspan="2"> <b>The solution will be appreciated for:</b> types and variable declarations; operations with the text files; reading and writing data; algorithm organization. </td> </tr> <tr> <td data-bbox="427 1769 790 1930"> 5 brad copac sos zero scurs </td> <td data-bbox="790 1769 941 1930">3</td> </tr> </table>	siruri.in	siruri.out	<b>The solution will be appreciated for:</b> types and variable declarations; operations with the text files; reading and writing data; algorithm organization.	5 brad copac sos zero scurs	3		L 0 1 2 3 4 5 6 7 8 9	L 0 1 2 3 4 5 6 7 8 9

On the field, delimited by:

- straights  $x=0$  and  $x=5$ ;
- the graph of the function  $f(x)=2\sin(x/2)+3$ ;
- $Ox$  axe,

will be built a park. Different trees will be planted in this park. For each tree, 8 units of surface are reserved. Develop a program that calculates the number of trees needed to be planted in the given park.

The area of the park is determined by calculating

the integral  $\int_a^b f(x)dx$  by *the right*

**rectangles method** for a number of divisions of the segment  $[a;b]$  known in advance  $n=50$ .

**Input:** The values of the extremities of the integration segment  $[0;5]$  and the number of divisions  $n$  are set directly in the program code.

**Output:** An integer number - the number of trees needed to be planted in the given park - is displayed on the screen.

**The following algorithm can be used to calculate the area:**

**Step 1:** Set the values of the integration segment's extremities  $a$ ,  $b$  and the number of divisions  $n$ .

**Step 2:** Calculate the length of the elementary segment

$$h = \frac{|b-a|}{n}; \quad S \leftarrow 0;$$

**Step 3:** For all  $i$  from 1 to  $n$ :

a) Calculate the value:

$$x_i \leftarrow a + ih;$$

b) Calculate the area of the elementary rectangle:

$$S_i = h \times f(x_i)$$

c) The calculated area is added to the previous calculated areas:  $S \leftarrow S + S_i$

Using the data from the database tables:

- a) Fill in, in the image *Image 2*, all the necessary elements, including the relations between the tables and define in *Design View* a parameter query which displays 3 fields - **Denumire**, **Genul** and **Anul**.

The query displays data about the movies (**Denumire** field) that are part of the *Comedy* or *Animation* genres (**Genul** field, **Comedie** or **Animatie** values) and were released in the year indicated as a parameter ( **Anul** field, **[An:]** parameter).

The records are displayed in the ascending order of the values in the **Denumire** field.
